

EU Research Program

How Asian laboratories might be
involved

Most Asian countries

- Have an agreement with EU
- This agreement generally include the possibility for labs of these countries to be included in an EU research project.
- If accepted , the project is funded by EU for european labs and by the concerned countries for the labs not of non EU countries.

2 main general research program of EU

- Integrated projects
- Network of excellence

Integrated projects

- Very large projects , typically more de 20 partners .
- Very heavy preparation of the project : about 1person.year + travel costs+...
- Very selective : probability of success about 5%
- Very difficult to manage

One integrated project

- Is presently prepared by Prof . Cappanelli fro the University of Genoa in Italy.
- Innovative membrane processes for water and wastewater treatment.
 - Innovative MR and Hybrid Membrane processes
 - Membrane contactors...;

Network of Excellence

- About 20 partners
- No research money but additional money for exchanges.
- Typically about 50 000 Euros per year for invitation of post doc , short or longer stays of PhD in other laboratories, visits of senior researchers,.

Advantages of NOE

- Easier to prepare and more chance to get it (about 10%).
- Easier to manage.
